

Windows Installation Instructions:

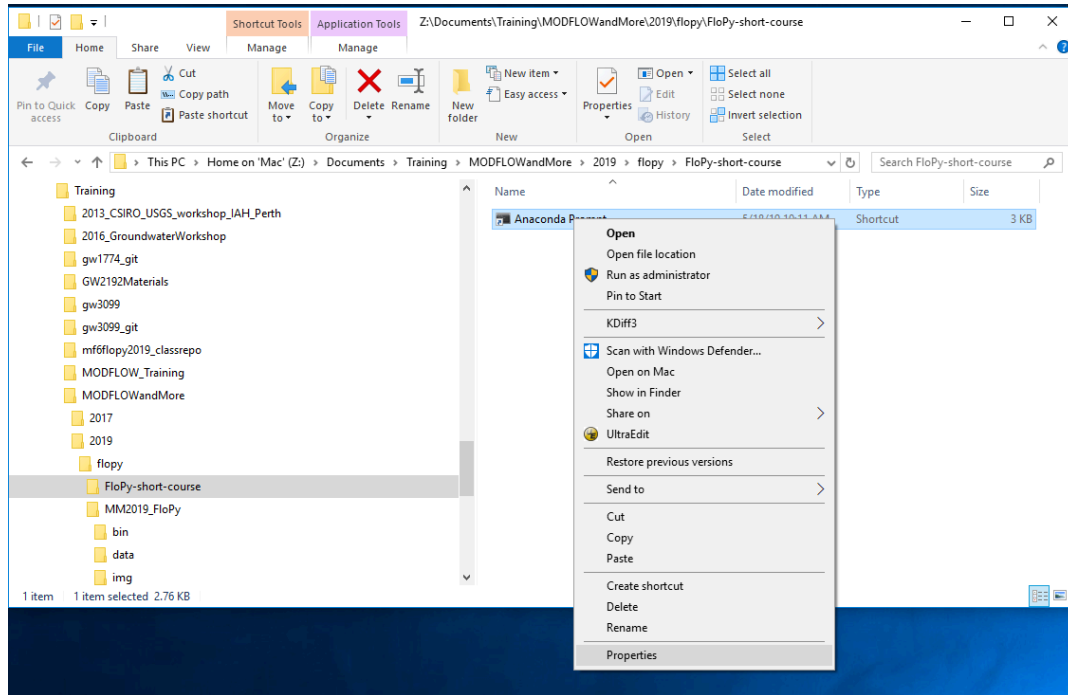

1. Make a working directory that you will use during the class (for example, *FloPy-short-course*). Please do not use spaces in the directory name.
2. Copy the installation and testing scripts (*install_packages.py* and *test_install.py*) to your working directory.
3. Copy the Anaconda Prompt to your working directory
 - a. Under Anaconda3, right click on the *Anaconda Prompt* and then select *More*→*Open file location*

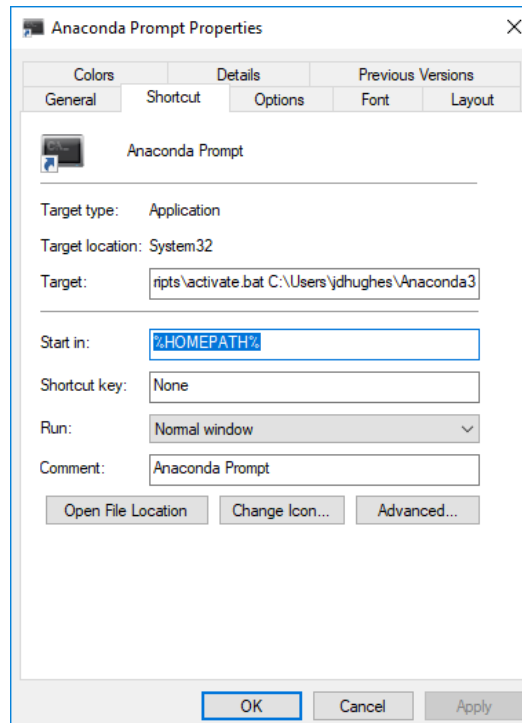

- b. Copy the *Anaconda Prompt* by right clicking on *Anaconda Prompt* selecting *Copy*. Next paste the *Anaconda Prompt* in your working directory.

- c. Right click on the *Anaconda Prompt* in your working directory and select *Properties*.

- d. Delete *%HOMEPATH%* in the *Start In:* text box and select *OK*.

- e. Double click on *Anaconda Prompt* in your working directory.
4. If you created a python environment in an existing Anaconda distribution run the following command in the command windows that opens:

activate <your environment name>

where *<your environment name>* is the name you gave your environment when you created it. Otherwise skip this step.

5. Run the following command in the command window that opens:

python install_packages.py

6. Report any errors that your encounter while the script is running. A successful test will look something like this.

```
Running tests of installed python packages in root installation...
  using python installed in "C:\Users\jdhughes\Anaconda3\python.exe"
C:\Users\jdhughes\Anaconda3\python.exe -m nose -v test_install.py
test_install.test_anaconda ... ok
test_install.test_modules('numpy',) ... ok
test_install.test_modules('matplotlib',) ... ok
test_install.test_modules('shutil',) ... ok
test_install.test_modules('subprocess',) ... ok
test_install.test_modules('pandas',) ... ok
test_install.test_modules('platform',) ... ok
test_install.test_modules('shapefile',) ... ok
test_install.test_modules('flopy',) ... ok
test_install.test_modules('pymake',) ... ok
test_install.test_modules('pyemu',) ... ok
test_install.test_matplotlib ... ok
test_install.test_cleanup ... ok
```

Ran 12 tests in 10.844s

OK
